

## SmartViser pilots Smartphone Test campaigns remotely

Rennes, February 24th, 2019

### **viSer Remote Testing Functionality is now Available.**

SmartViser, the recognized expert in Automated Mobile Device Testing solution, announces that its flagship product viSer new Remote Testing Functionality is now Available.

Before launching a new smartphone or during the device updating phases, Manufacturers need to check the interoperability of their products on live network conditions.

Currently, this is achieved in two ways: either Field Test Team is sent to test locally or Local Representatives are asked to perform the Testing in real network conditions.

Both options are very expensive and time consuming as staff are not always available.

With the new Remote Control feature of viSer, Manufacturers can activate any smartphone wherever it is in the world, launch the Testing they need to be performed, control all the processing and get immediate reliable results. All of this can be operated Simply, straight from the central test team desk and in a highly cost-effective way.

### **About SmartViser**

SmartViser is a recognized expert in Test Automation. Organizations of all sizes -ranging from Mobile Network Operators, Device OEMs & ODMs, Media Specialists and Industry players- have selected the viSer test suite and its extended services to assess mobile devices and measure QoE and QoS.
