

## **French Mobile Network Operator selects SmartViser Testing Solution to address Voice Quality Challenge**

Rennes, February 23rd, 2019

SmartViser has developed an end to end solution that enables Mobile Network Operators and Device Manufacturers to consistently test and measure Voice Quality when dealing with new device acceptance and network optimisation.

Technology is leading us toward full IP Networks and the most impacted function appears to be the voice quality.

As a direct consequence, Mobile Network operators must face complexity in testing VoIP (VoLTE, VoWiFi) in a high number of cross situations: cross RATS, cross operators, cross devices...

By choosing SmartViser AUDIO MOS Solution, a French Mobile Network Operator has acquired the means to make sure that they will deliver the best Voice satisfaction to their consumers, as calling remains an essential functionality.

### **About SmartViser**

SmartViser is a recognized expert in Test Automation. Organizations of all sizes -ranging from Mobile Network Operators, Device OEMs & ODMs, Media Specialists and Industry players- have selected the viSer test suite and its extended services to measure QoE and QoS.
